# function

## Hair removal

Powerful home laser hair removal technology. Three energy parameters are provided to meet the requirements of safe and effective hair removal for different populations

## Skin rejuvenation

Utilizing biological stimulation and the principle of photopyrolysis  
Thus achieving a series of cosmetic and rejuvenating effects

## How 808 Ice Hair Removal Works

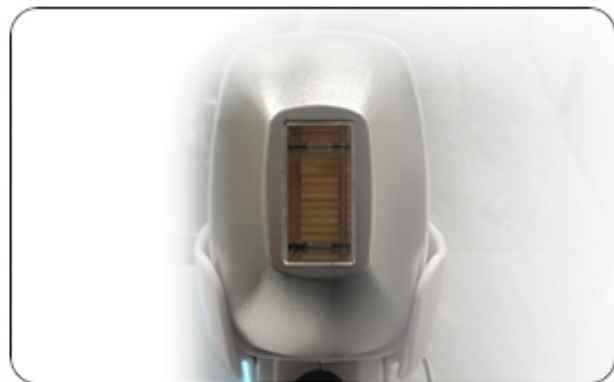

808 Ice is based on the selective photothermodynamic principle, through the reasonable adjustment of laser wavelength, energy and pulse width. The light energy passes through the surface layer of the skin and reaches the hair follicles at the root of the hairs. It is absorbed and converted into heat energy that destroys the hair follicle tissue. So that the hairs lose the ability to regenerate.

# Strong Cooling

Advanced cooling system and crystal tip minimize epidermal risks while maintaining heat within the dermis where the hair follicles are treated, to make sure the treatment safer and more comfortable.

Triple wavelengths, best result for hair removal of all skin types and hair colors.

Based on skin tone strips  
Select the skin color corresponding to the operator for operation

DY.dingyu +

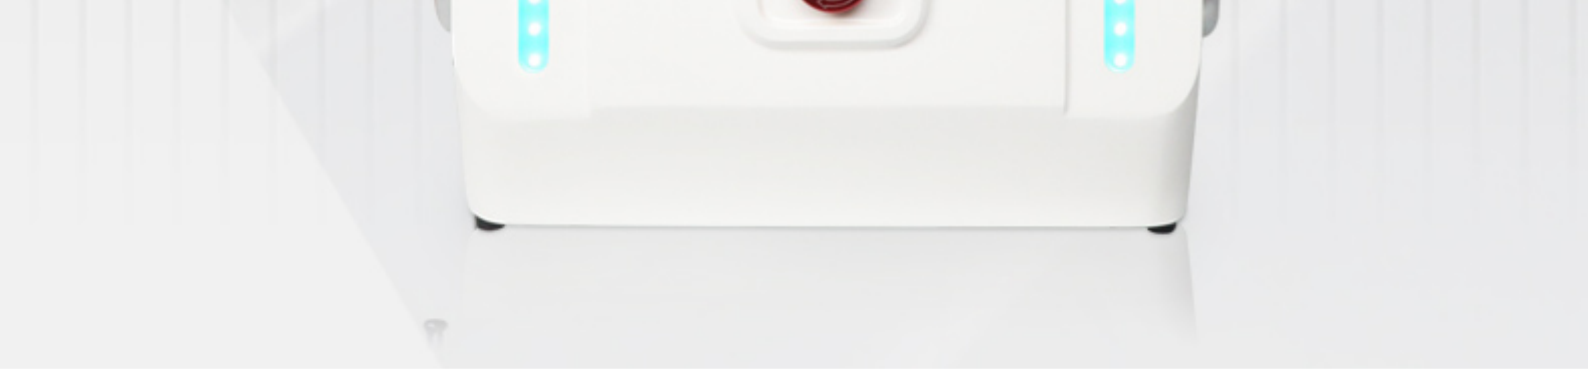

# Exclusive Appearance

Optional configuration

2023 New Products

Technologically inspired exterior design

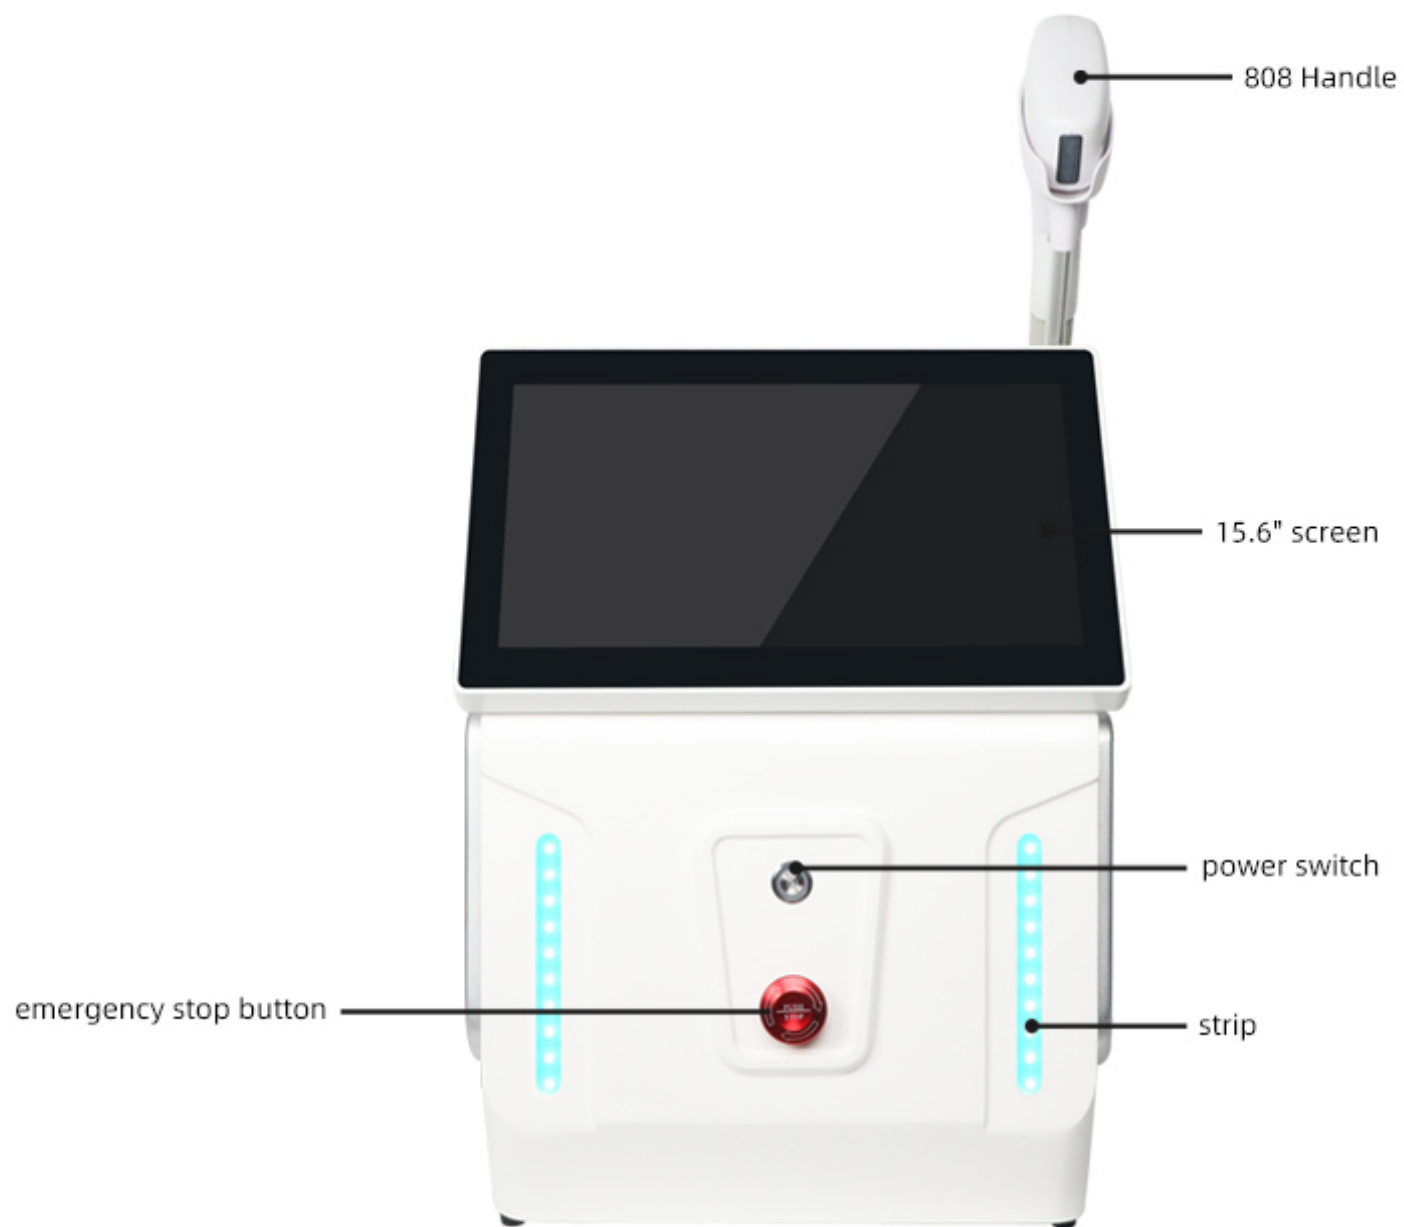

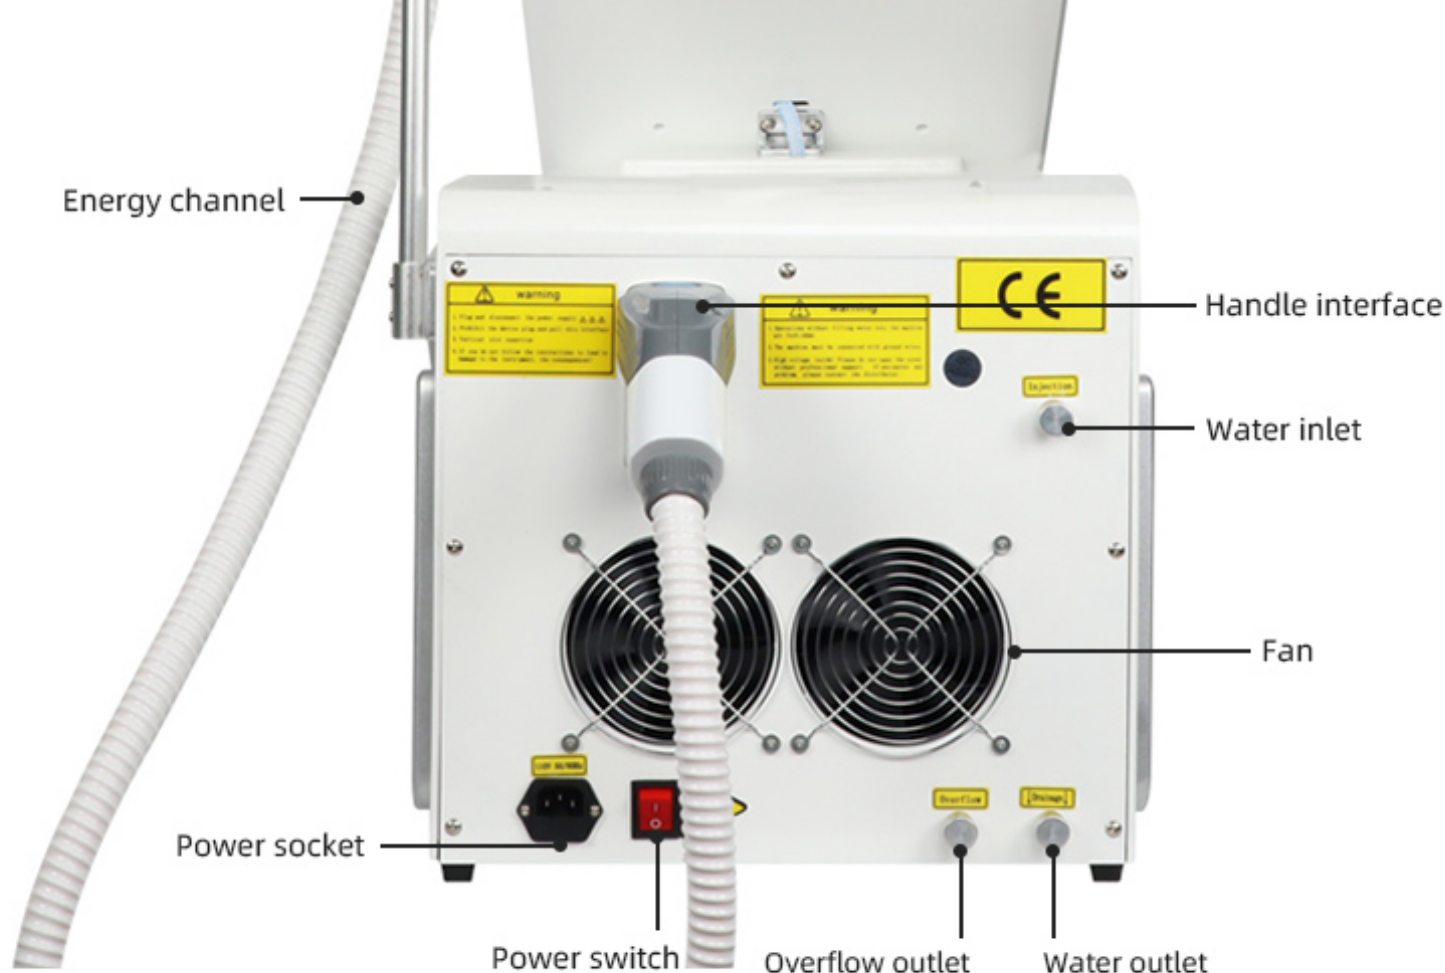

## Product Parameter

Model:	DY.T101A
Box size:	60*46*56cm
Gross weight:	39kg
Packing:	1 set
Packing:	Aviation box
Screen size:	15.6in
Voltage:	110v / 220v
Cooling system:	water cooling + air cooling
Power:	2000w
Frequency:	10
Language:	Support various language customisation
Hair number:	808 = 50 million
Hair removal wavelength:	755nm, 808nm, 1064nm
Optional:	single hair removal, double hair removal, laser + hair removal

**structural analysis**

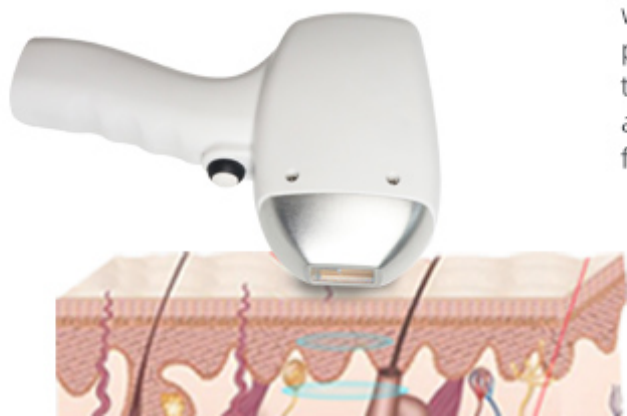

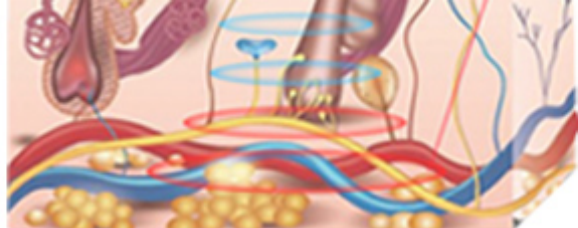

## Function explanation

### How 808 Ice Hair Removal Works

808 Ice is based on the selective photothermodynamic principle, through the reasonable adjustment of laser wavelength, energy and pulse width. The light energy passes through the surface layer of the skin and reaches the hair follicles at the root of the hairs. It is absorbed and converted into heat energy that destroys the hair follicle tissue. So that the hairs lose the ability to regenerate.

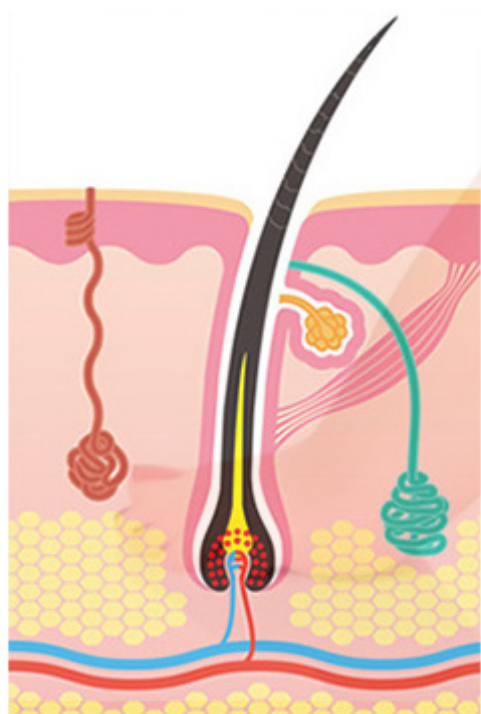

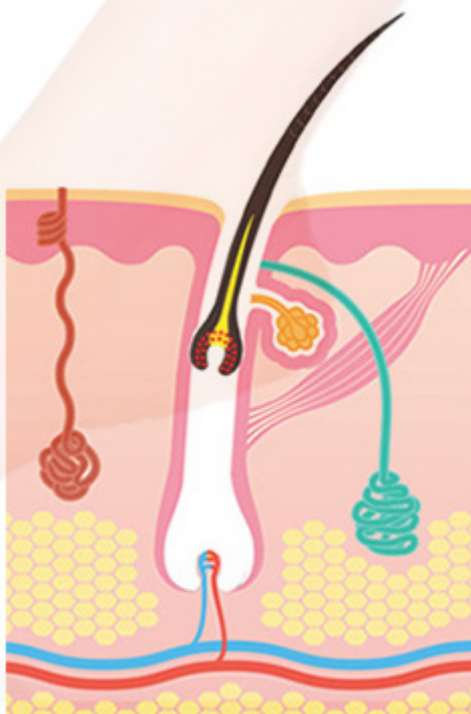

## Smooth skin Beautiful and visible

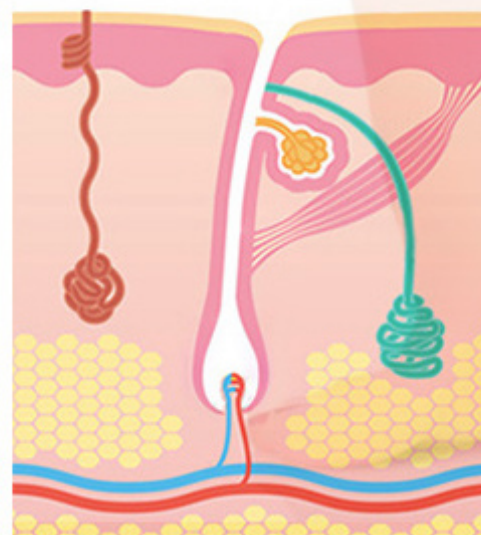

Depilation over and over again  
Not decreasing but increasing but also thickening

Laser selectively acts on melanin in hair follicles and destroys stem cells around hair follicles

Stem cells around hair follicles are damaged and hair falls off naturally

The destruction process of hair follicle is irreversible to achieve the purpose of complete hair removal

# operable part

mouth

Arms

Armpit

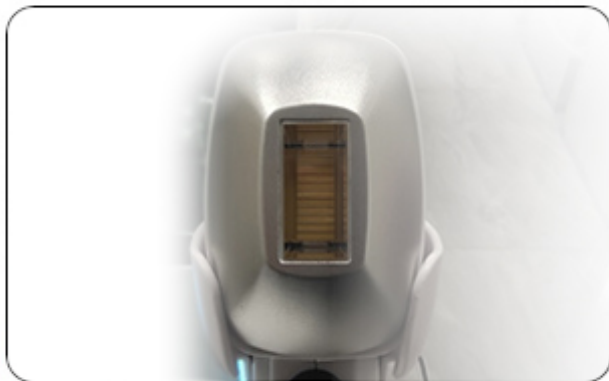

Back

Legs

## Strong Cooling

Advanced cooling system and crystal tip minimize epidermal risks while maintaining heat within the dermis where the hair follicles are treated, to make sure the treatment safer and more comfortable.

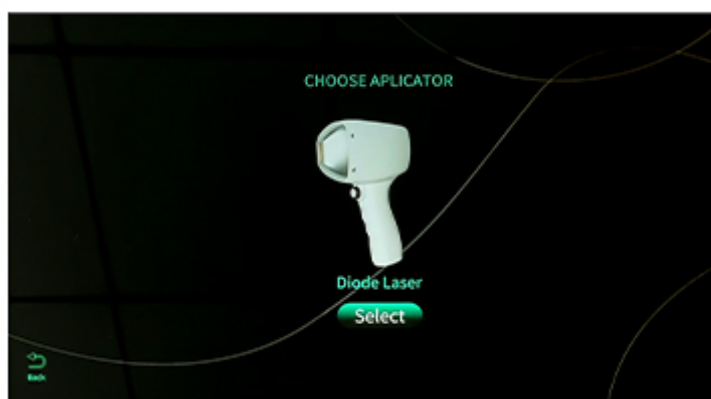

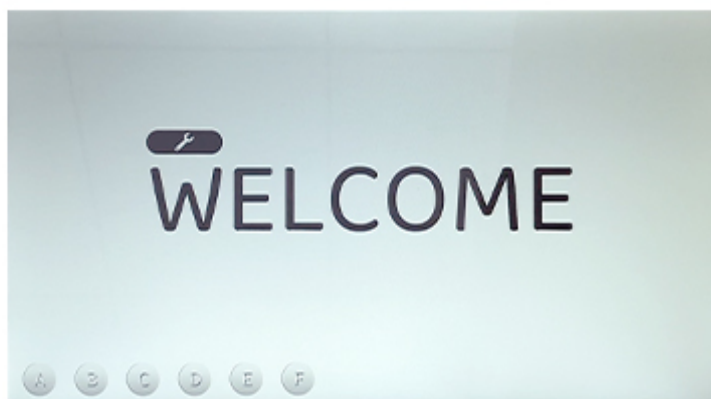

Triple wavelengths, best result for hair removal of all skin types and hair colors.
